## Cruel segment - hides some 'rich' among the 'poor'

## Still worth it to charge lowest price

#### Next valuation plays out the same way

#### Everyone gets the good. Producer surplus is meh.

### Above example corresponds to C

Limits of Price Discrimination

э

## Monopolist might have preferred this $\rightarrow$ B.

The paper has lovely diagrams on a simplex to illustrate all of this, and shows it works when valuations are continuous.

Jeremy Large

Limits of Price Discrimination

8/4

# Knowledge is power, France is bacon (?)

Maybe there's a misconception  $\uparrow$ . Doubt.

Exactly which form of segmentation arises in practice is not entirely in the hands of the monopolist.

 $\rightarrow$  depends on data structure, regulation, technology, vicissitudes

'relationship between efficiency and information can only be understood in the context of how data will be used'

#### So a natural and important direction for future research

is to better understand which forms of price discrimination will endogenously arise, and for whose benefit.
